

ABSTRACT OF THE DISCLOSURE

An encryption key depositing apparatus comprising a unit that generates an encryption key for a user; and a unit that starts a process in response to the generation of the encryption key, the process allowing a depositary deposited with the generated encryption key to store the key in question in a subsequently recoverable manner.

1. A unit that generates an encryption key for a user; and a unit that starts a process in response to the generation of the encryption key, the process allowing a depositary deposited with the generated encryption key to store the key in question in a subsequently recoverable manner.
